Subject: **Review of Plans -** Proposed Residence
8560 + 8562 Sand Point Way Northeast
Seattle, Washington

Reference: "Geotechnical Engineering Study," subject site, GCI., June 27, 2025

Plans: **MWJ Architecture**– Sheets A1 → A9 (Dated February 4, 2026)
BTL Engineering– Sheets S-1.1 → S3.6 (January 28, 2026)

Dear Mr. Richardson:

We have completed a general review of the geotechnical aspects of the referenced plans and specifications for proposed residence, .We understand that the new foundation will be constructed inside of the existing building foundation to avoid excavation shoring.

In accordance with Seattle DPD Director's Rule 5-2016, the following statements are made: In our judgment, considering the above comments, the referenced plans conform to the recommendations in our geotechnical engineering report. If the recommendations and conditions of the geotechnical engineering report are satisfied during construction and use of the project, the proposed project will not increase the potential for soil movement. The areas disturbed by construction will be stabilized and should remain stable, subject to the conditions of our geotechnical engineering report. The risk of damage to the proposed development, or to adjacent properties, from soil instability on this site will be minimal, subject to the conditions set forth in our report. The use of the word "minimal" should not be taken to imply that there is no risk, but rather that the risk is low, as construction on, or close to, slopes always involves some risk.

We acknowledge appointment as Special Inspector for this project, and by copy of this letter, request that we be kept informed of the progress of construction so we are able to make the necessary observations, as required by the Seattle DCI, in a timely manner.

If you have any questions, or if we may be of further service, please do not hesitate to contact us.

Respectfully submitted,
